

VirusBuster MailShield for Novell GroupWise

▼ Corporate users

▶ Mail servers – Novell GroupWise

Nowadays most of the viruses and other harmful programs arrive in e-mail, therefore filtering the e-mail traffic of companies for viruses is crucial to avoid virus infections. The dramatic increase in the number of spam e-mails puts a heavy load on e-mail servers and deleting these e-mails can take a long time therefore every mail filtering product must contain an effective spam filter.

VirusBuster MailShield for GroupWise is the first anti-virus solution developed for GroupWise systems, which contains its own virus scanning engine. The product can be installed as a module of VirusBuster for Novell NetWare. Integrated into the mail system, VirusBuster MailShield provides continuous protection by filtering the e-mail traffic for viruses and other malicious codes and spam.

- Scanning of incoming and outgoing e-mail
- Easy to integrate with GroupWise
- Statistical spam filtering with many evaluating methods
- WormBuster for blocking I-Worms instantly
- Permissive and exclusive file filter to block potential virus carriers
- Modular architecture for ease of use
- Outstanding performance, which is guaranteed by VirusBuster's virus scanning engine
- Automatic virus database updates

Minimum System requirements:

- **Novell NetWare Server 4.1, latest Support Pack**
- **Novell GroupWise 5.5**
- **Intel Pentium (or compatible) 200 MHz**
- **64 MB of available RAM**
- **40 MB of available disk space**
- **For the spam filter:**
 - **Novell NetWare Server 5.1, Support Pack 4 or Novell NetWare Server 6.0, Support Pack 1**
 - **+64 MB of available RAM**
 - **+40 MB of available disk space**

VirusBuster MailShield for Novell GroupWise

Resident protection

The product protects your system by working in the background and scanning every e-mail before they are delivered to users' mailboxes by creating a filter on GroupWise Internet Agent's mail traffic. MailShield for GroupWise is based on VirusBuster for Novell NetWare and is using its central logging to store its own log entries therefore the status of the whole defense module can be overviewed in one place.

Various filtering options

The product not only lets you scan in attachments, but with the help of the permissive and exclusive file filter, specified file types can be blocked, therefore potential virus carriers can be locked out of the network. The WormBuster feature is included in the product to provide the option of blocking all I-Worms instantly. As the product blocks the whole e-mail, the e-mail traffic is not increased by messages, which only contain worms and do not have a useful content. The spam filter, which uses heuristic recognition as well, saves money and time for your company. Filtering spam e-mail not only decreases the load on your mail server, but saves the time, which is spent by employees, who are trying to get rid of the unsolicited e-mail messages.

Outstanding performance and effectiveness

VirusBuster MailShield for GroupWise is based on VirusBuster's scan engine, which has an outstanding performance. The engine uses heuristic analysis to detect harmful programs. Thanks to its platform- and operating system independent scanning methods it effectively scans for all known viruses, worms, trojans, backdoors, scripts, macro viruses and other harmful code on any system. Depending on the memory, it scans multiple compressions to any depth in numerous compression types and self-extractors. To improve scanning these files, the engine uses emulation techniques.

Features:

- Outstanding performance, guaranteed by VirusBuster's virus scanning engine
- Modular architecture for ease of use
- Virus scanning of incoming and outgoing messages and the removal of all viruses
- WormBuster for blocking I-Worms instantly
- Replacement of infected attachments with warning attachments
- White list (permissive list)
- Advanced notification and log system: a notification can be sent to the administrator and/or the sender of the message.
- Automatic program and virus database update via FTP
- Traditional, easy-to-use Novell user interface
- Easy integration with the GroupWise system
- Spam filtering:
 - Statistical spam filtering with many evaluation methods
 - Heuristic analysis
 - White list (permissive list)
 - Filtering of HTML-based messages
